Safety Science 19 (1995) 319–320

safety science

Contents Volume 19

Vol. 19, No. 1 (April 1995)

Integrating analyses of the risk of occupational accidents into the design process – Part II: Method for prediction of the LTI-rate
U. Kjellén 3
High heels and polished floors: The ultimate challenge in research on slip-resistance
D.P. Manning and C. Jones 19
A comparison of vehicular approach speed and braking between day and nighttime periods at an automated railway crossing
N.J. Ward and G.J.S. Wilde 31
Injury potential prediction of a safety design feature: A theoretical method based on simulations and traffic accident data
H. Norin and I. Isaksson-Hellman 45
Combining accident data and laboratory simulation data reduces the risk for sub-optimized safety systems in cars
H. Norin, M. Koch, S. Ryrberg and S.-E. Svensson 57

Vol. 19, Nos. 2–3 (June 1995)

Preface: Safety of transportation 81

A. Generic methods and techniques

Phase 1: Problem identification
Epidemiology, causes and prevention of bicycle wheel entanglements
J.H.A. Bruggers and S. Mulder 87
Analysis of recent trends in bus and coach safety in Britain
P. White, N. Dennis and N. Tyler 99
Accident prediction models for signalized crosswalks
A. Tarko and M. Tracz 109
Conducting in-depth accident studies
M. Galer, P. Thomas and M. Bradford 119

Elsevier Science B.V.

Accidents – In-Depth Analysis; towards a method AIDA?
J.A. Stoop 125

Phase 2: Problem specification
Don't wait for accidents – possibilities to assess risk in traffic by applying the 'Wiener Fahrprobe'
C. Chaloupka and R. Risser 137
Technological support for decision making in a safety critical environment
R. Bentley, J.A. Hughes, D. Randall and D.Z. Shapiro 149
Nautical safety and efficiency: simulation and reality
J. Perdok and P.H. Wewerinke 157
Full-scale collision tests
A.F.C. Carlebur 171
Theoretic model for the computer analysis of vehicle collisions
C. Vera, F. Aparicio and J.L. San Román 179

Phase 3: Weighting and balancing
Inland waterway transport: Modelling the probability of accidents
D. Roeleven, M. Kok, H.L. Stipdonk and W.A. De Vries 191
A comprehensive assessment system for the maritime traffic environment
K. Hara and S. Nakamura 203

Phase 4: Implementation: Road design
Self-explaining roads
J. Theeuwes and H. Godthelp 217
The effect of environmental and design parameters on subjective road safety – a case study in Poland
L. Zakowska 227

B. New concepts

Automation and the future of driver behavior
W. Janssen, M. Wierda and R. Van der Horst 237
Intrinsic road safety: A new approach?
J.H.A. Van Uden and A.H. Heijkamp 245
Safe design of personal rapid transit systems
J.E. Anderson 253
A broad-brush outline for the railways of the next century
J.L. De Kroes 265

C. Independence of investigation

Independent investigation of transportation accidents
T. Baxter 271
Sea transport safety – A challenge to European maritime society
J. Froese 279
Flying is not safe
B. Baksteen 287
Safety Recommendations – The engine that drives change
B.M. Sweedler 295
